Tamarack Grove Engineering recommendation Letter

To whom it may concern,

I have works with Brian Sielaff at Tamarack Grove Engineering now for a number of years. Here at Albertson's we have a practice of doing a RER (Remodel Evaluation Report) for all of the remodel projects we are planning. What we have found is it is very important to do these studies, up front to understand the issues at each proposed project. Brian has been a key part of these reports in evaluation of structural issues. The preliminary evaluations are so very important to looking at our projects that it has become a standard practice and has provided us very important information early on in evaluating the scope of projects. In these tough economic times; it is more important than ever to understand the project going in to help provide the best picture of cost for the Owner/Client.

I would recommend Brian and his company as a key part of project evaluation and design. This company has always been very helpful in gathering facts up front and reviewing options in the design stages as well. I must tell you I am always challenging Brian to look at something a different way and he has always been open to review and provide me input as well. He as always been concern with my schedule and I must say has always delivered when the time was short. Brian is someone that you really want on your team to make the impossible happen.

Please fell free to call me if you would have any questions at (208) 395-4571

Sincerely;

Kent W. Heasley
