

BRIDGESTONE STRUCTURAL MAINTENANCE

BRIDGESTONE RETAIL OPERATIONS, NASHVILLE, TN MAINTENANCE

NATIONWIDE • WWW.BRIDGESTONEAMERICAS.COM

Structural Maintenance of Bridgestone locations across the country to help them become safe and operable quickly.

CHALLENGE

When Bridgestone notices an issue with their building, they need to know what is happening, why it's happening, and most importantly how can they fix it. This is critical to ensuring they maintain safe operable locations to serve their customers. With so many structures across the country at various ages, they all need something different at different times and all face different local regulations. With a different engineer at each location, Bridgestone found a lack of consistency and efficiency from the type of information they received to the way it was presented, to the fees on top of the time it took to find a new engineer each time they needed on. They were also lacking a working relationship with a firm they could trust to take care of them.

SOLUTION

Tamarack Grove Engineering (TGE) focuses on forensic engineering, maintenance services, relationships, and best of all is licensed across North America. What this gave Bridgestone was confidence in a "go-to" team. No matter where the site was located, TGE was licensed to work there and had the depth of experience within the office to have someone on site within two weeks or much less for urgent matters and have a report prepared shortly after answering their questions. Having a broad engineering base is extremely valuable because sometimes things aren't as they seem and a structural issue may be caused by something outside of the structure itself. This gave Bridgestone the ability to receive results consistently and efficiently so they could get their sites safe and operational again quickly.
