

CALVARY CHAPEL

RELIGIOUS

MULTIPLE LOCATIONS THROUGHOUT IDAHO

Structural design of a new church facility that can benefit the church body to continue to grow. Even though it may seem like a simple concept it is important to keep in mind that all input on a project is valuable and should be considered.

CHALLENGE

Working with a church is a very different dynamic than what may be typical in other “commercial” types of work from the standpoint of the “owner” is not just one person or small group of people but instead tends to be a whole congregation. Therefore, you have that many more opinions on what they want the structure to look like, how it should be built, what is an appropriate budget, and so much more. But the best part of working on a church project is that the “owner” is a whole congregation. This allows for fantastic input from varying backgrounds, an eagerness to volunteer to help with the project, and lots of potential resources.

SOLUTION

Tamarack Grove Engineering is a relationship driven company which aligns well with church type projects since the focus is on the client, ultimately being the owner’s needs. This focus on the needs of others is a value fit with the congregations we work with. To work with these congregations we take a very collaborative approach wanting to receive input from the congregation on the design as well as what may be available to the congregation in terms of available skills of volunteers, materials they may already have available, their specific needs, or potential community involvement. There is no one size fits all approach and we want to make sure we work with the congregation to ensure that the final design is the best possible design for the congregation for years to come.
