

ENVIRONMENTAL DAMAGE

NATIONAL RETAILERS, RESTAURANTS, FACILITY
MAINTENANCE COMPANIES
RESTORATION

NATIONWIDE

Getting a structure safe to occupy when Mother Nature throws a punch.

CHALLENGE

Weather and other natural disasters like snowstorms, tornados, earthquakes and hurricanes can take business out of operation creating huge safety issues. Getting back up and running quickly is critical to any business. To avoid liability and more important to secure the safety of everyone, it must be done correctly.

SOLUTION

It is critical to have a forensic engineering report performed quickly so that the correct actions can be taken. Tamarack Grove Engineering (TGE) takes pride in our urgent response to be on-site quickly and provide the forensic engineering report and findings needed within a few days that will help facilities become operational quickly and safely. On severe cases repairs, we have also been able to provide the reports and drawings with the correct method for repair.

Every new project gives builds our knowledge and experience about how structures perform under environmental effects so that we can apply that knowledge for our future clients such as snow drifts due to adjacent buildings, how "green" concrete performs after exposure to hurricane winds and potential catastrophic failures based on visual observation.

Our experience and licensure across North America allows us to be an extension of the team for national retainers, restaurants and facility maintenance companies so when something happens, no matter the location, we are able to step in and help quickly. And, for the owner, liability is always of great concern. As the engineer of record, we take on that liability for you giving you greater peace of mind.
